DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.

2. Claims 1-5, 7-14, 16, 17, 20, 23-26, 28-34, 36, 37, 39, 42-45, 47-53, 55, 56, 58, 65 and 68 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1-5, 7-14, 16, 17, 23-26, 28-34, 36, 37, 42-45, 47-53, 55, and 56 are indefinite because the term "high power density" is a relative term.

Claims 4, 13, 20, 25, 33, 39, 44, 52, 58, 65 and 68 are indefinite because the chemicals formulas included in the claims are not conventional chemicals formulas.

Claims 65 and 68 are indefinite because the boundaries of the term "the other applicable gases are undefined.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States

,Art Unit: 1746

only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 61- 68 are rejected under 35 U.S.C. 102(b) as being anticipated by Engelsberg (US Patent No 5,821,175).

Engelsberg teaches a method as claimed.

See entire document, especially figures 19 and 20 and the related description and columns 10 and 14.

It is noted that recalculation of the laser parameters disclosed in column 14, lines 33-38 shows that energy density of the disclosed laser applied to the specified spot is inside of the claimed region.

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 - 1. Determining the scope and contents of the prior art.
 - 2. Ascertaining the differences between the prior art and the claims at issue.
 - 3. Resolving the level of ordinary skill in the pertinent art.
 - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Art Unit: 1746

7. Claims 1-60 are rejected under 35 U.S.C. 103(a) as being unpatentable over Agarwal (any of US Patents No 6,095,085; 6,153,529; and 6,576,564) in view of the prior art admitted by the applicants in the specification (pages 1-4).

Agarwal teaches a method for conducting any plasma-enhanced process (including cleaning) with assistance of lasers. The laser light is applied to remote section and/or to the reaction chamber.

Agarwal teaches the use of UV light, which is inside of the claimed range of wavelength.

Agarwal teaches the use of the light to assist in activation of the same gases as claimed (C_3F_8) .

Agarwal does not specifically teach a cleaning of the chamber.

However, the applicants admitted that cleaning plasma processing chambers by reactive plasma of the claimed fluorine containing gases was conventional in the art.

Having the teachings of Agarwal and the admitted prior art It would have been obvious to an ordinary artisan at the time the invention was made to clean the chamber of Agarwal by in-situ plasma cleaning with reactive gases with generating and sustaining the plasma by a method disclosed by Agarwal with reasonable expectation of adequate results in order to have the chamber cleaned.

As to the power limitation: Agarwal does not explicitly disclose the power of the lasers. However, since Agarwal discloses activation of the same gases as claimed it is reasonably believed that the power, which is used by Agarwal is the same as claimed.

Art Unit: 1746

In alternative: the applied power is a result effective variable, thereby it would have been obvious to an ordinary artisan to find an optimum power in the modified method of Agarwal by routine experimentation in order to enhance the process.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US Patents 6,178,973; 6,098,637; 6,150,265 and 5,531,857.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alexander Markoff whose telephone number is 703-308-7545. The examiner can normally be reached on Flex.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Randy P Gulakowski can be reached on 703-308-4333.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703--308-0651.
